

29th June 2021

Dear Sir/Madam

Letter of Reference – BryTech Solutions Ltd

Osmoflo employed the services of BryTech Solutions Ltd to manage the design of the Barka I Expansion Phase II Project in Oman, a 56,826 m³/d seawater reverse osmosis desalination plant.

BryTech Solutions Ltd commenced with Osmoflo in 2013 undertaking the concept design, proposal development, client technical negotiations through to contract execution of the project on 4th January 2015 from which point BryTech Solutions Ltd managed and developed the detailed design through construction execution and completion. In addition to providing Design Management for the project, BryTech Solutions Ltd provided extensive practical skills and experience to play a lead role in the commissioning, performance testing, operational tuning and commercial delivery of a complex, multi-phase delivered project. BryTech Solutions Ltd subsequently provided expert technical advisory services on commercial project close-out matters through direct negotiations with Osmoflo's client ACWA Power Barka. This same sort of service has continued on a number of other projects in the Middle East region as well.

Osmoflo is completely satisfied with the services provided by BryTech Solutions Ltd and since 2013 to current have engaged them on regular basis to support our business technically. I am very happy to recommend this company and to provide reference at any time.

Yours Sincerely,

Mr Bobby Watson

General Manager, Middle East & Africa
